

Kali-Pota

Kalium/Potassium, very important for symbiotic algae growth used by corals.

Highly concentrated ionic solution. During the growth of corals, Kalium is consumed, and needs to be replaced, in order to avoid a shortage of Kalium in the reef aquarium.

Kalium/Potassium formula is the result of several years of research in its dosage in reef aquaria.

User Instructions : Weekly add 1 bottle cap (15 ml) per 300 L. When an extreme shortage of Kalium appears, up to 5 doses per day can be added per 300 L aquarium water. Avoid overdosing, control regularly the Kalium value ! Distribute the Kalium/Potassium X-Pro near the outlet of the pump, preferably in the morning.

Safety measures : Keep out of reach of children. In case of direct contact with skin or clothes, rinse immediately.
